Baseline Geochemical Data for Stream Sediment and Surface Water Samples from Panther Creek, Middle Fork of the Salmon River, Main Salmon River from North Fork to Corn Creek, Collected Prior to the Severe Wildfires of 2000 in Central Idaho:

U.S. Department of the Interior, United States Geological Survey (USGS), et al., Robert G. Eppinger

Baseline Geochemical Data for Stream Sediment and Surface Water Samples from Panther Creek, Middle Fork of the Salmon River, Main Salmon River from North Fork to Corn Creek, Collected Prior to the Severe

By Robert G Eppinger

Bibliogov, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.In 1996, the U.S. Geological Survey conducted a reconnaissance baseline geochemical study in central Idaho. The purpose of the baseline study was to establish a geochemical snapshot of the area, as a datum for monitoring future change in the geochemical landscape, whether natural or human-induced. This report presents the methology, analytical results, and sample descriptions for water, sediment, and heavy-mineral concentrate samples collected during this geochemical investigation. In the summer of 2000, the Clear Creek, Little Pistol, and Shellrock wildfires swept across much of the area that was sampled. Thus, these data represent a pre-fire baseline geochemical dataset. A 2001 post- fire study is planned and will involve re-sampling of the pre-fire baseline sites, to allow for pre- and post-fire comparison.
