

Nonlinear Digital Filters Principles and Applications The Springer International Series in Engineering and Computer Science

By Ioannis Pitas

Springer. Hardcover. Book Condition: New. Hardcover. 392 pages. Dimensions: 9.3in. x 6.2in. x 1.1in. The function of a filter is to transform a signal into another one more suitable for a given purpose. As such, filters find applications in telecommunications, radar, sonar, remote sensing, geophysical signal processing, image processing, and computer vision. Numerous authors have considered deterministic and statistical approaches for the study of passive, active, digital, multidimensional, and adaptive filters. Most of the filters considered were linear although the theory of nonlinear filters is developing rapidly, as it is evident by the numerous research papers and a few specialized monographs now available. Our research interests in this area created opportunity for cooperation and coauthored publications during the past few years in many nonlinear filter families described in this book. As a result of this cooperation and a visit from John Pitas on a research leave at the University of Toronto in September 1988, the idea for this book was first conceived. The difficulty in writing such a monograph was that the area seemed fragmented and no general theory was available to encompass the many different kinds of filters presented in the literature. However, the...

Reviews

This book will never be straightforward to start on reading through but quite enjoyable to learn. Better than never, though I am quite late in starting reading this one. Your lifestyle span will probably be converted once you complete reading this publication.
