Functional Analysis and Applications

By L. Nachbin

Springer Mai 1974, 1974. Taschenbuch. Book Condition: Neu. 235x155x15 mm. This item is printed on demand - Print on Demand Titel. Neuware - Prolongement analytique en dimension infinie.- Some recent results on topological vector spaces.- Usefulness of pseudodifferential and fourier integral operators in the study of the local solvability of linear partial differential equations.- Bounding sets in banach spaces and regular classes of analytic functions.- Modules of continuous functions.- Wave front-sets.- Fundamental solutions of hypoelliptic boundary value problems.- The green function of a linear differential equation with lateral condition.- Singular perturbations of hyperbolic systems.- The bounded case of the weighted approximation problem.- On nonlinear integral equations of Hammerstein type with unbounded linear mapping.- Un 'extension des théorémes de malgrange et martineau.- Partial differential equations in holomorphic fock spaces.- A note on the eigenvalues of compact operators. 272 pp. Englisch, Französisch.

Reviews

This publication is amazing. It is definitely basic but shocks in the fifty percent of your publication. You wont feel monotony at anytime of your own time (that's what catalogues are for concerning if you question me).
-- Prof. Kirk Cruickshank DDS

This kind of book is every little thing and taught me to looking ahead of time and a lot more. I am quite late in start reading this one, but better then never. I found out this book from my dad and i encouraged this pdf to find out.
-- Justus Hettinger
